

Supplementary Figures and Tables

Supplementary Figures

Figure S1(a). The 2006 experimental design in a study of rice and mungbean cropping systems in rubber plantation intercropping.

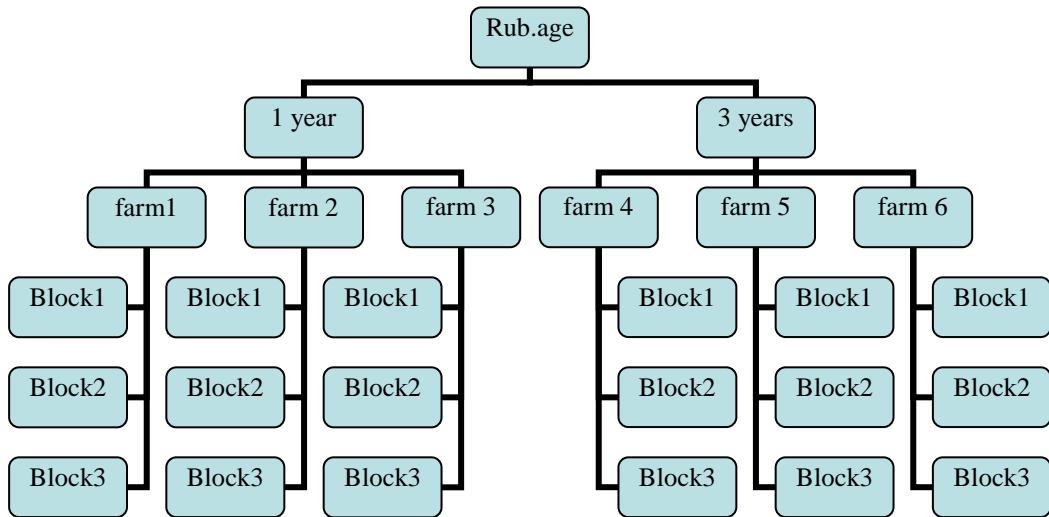

Figure S1(b). The schematic drawing of treatment arrangements in each block. The intercropping treatments 1 to 8 which were shown in Table 2 were randomized into each subplot in the blocks.

Block 1	Block 2	Block 3
2	8	5
1	6	6
3	5	8
4	7	7
6	1	3
8	2	1
5	4	4
7	3	2

Figure S2. The 2007-2008 experimental design in a study of rice and mungbean cropping systems in rubber plantation intercropping. The rubber tree age was different at each farm: 1, 1.5, 2, 2.5 and 3 years. Since there was no replication of age group, age and farm do not appear in this design at the same time. The intercropping treatment arrangements in each block are similar with that in S1(b).

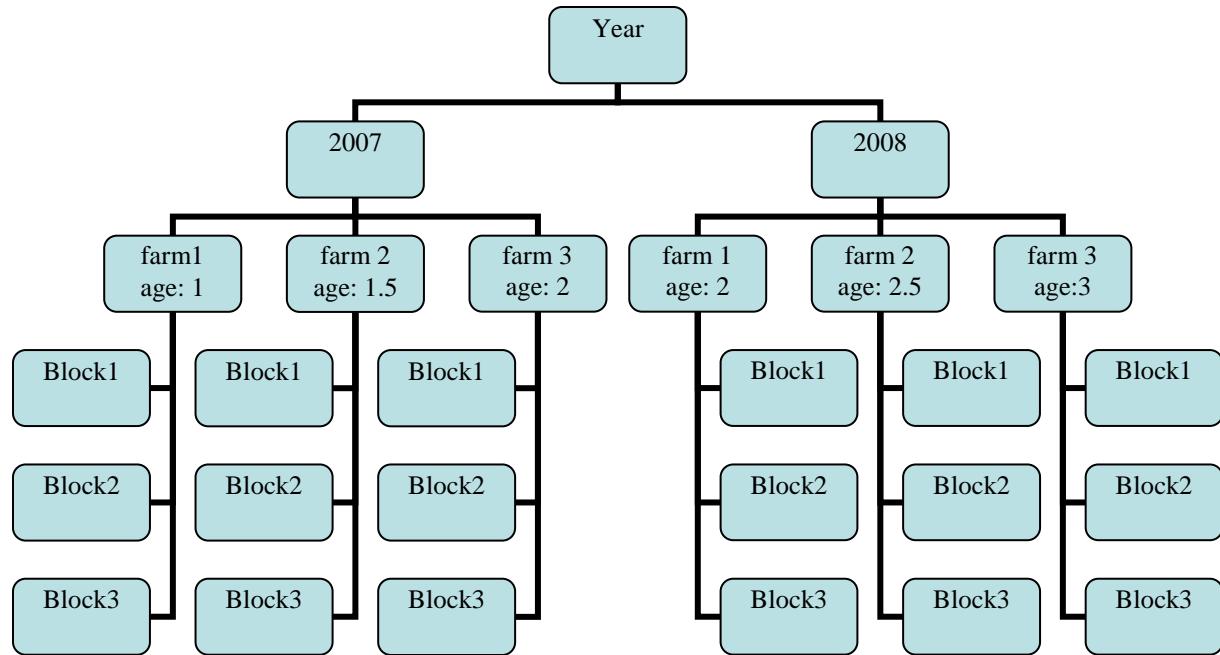

Figure S3. 95% confidence intervals for the mean yields of Dinorado, UPL Ri-5 and mungbean in 2006 - 2008. Treatment abbreviations are given in Table 2.

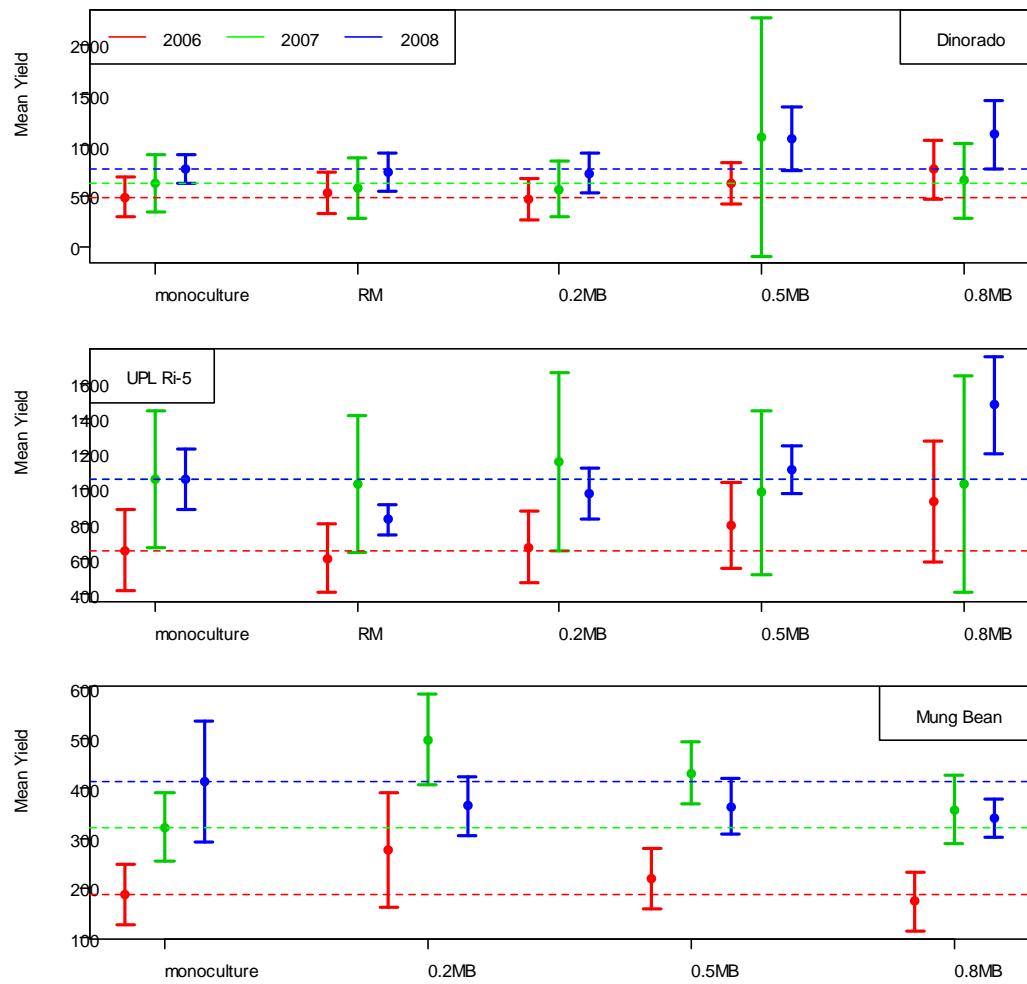

Figure S4. 95% confidence interval for the land equivalent ratio (LER). Treatment abbreviations are given in Table 2.

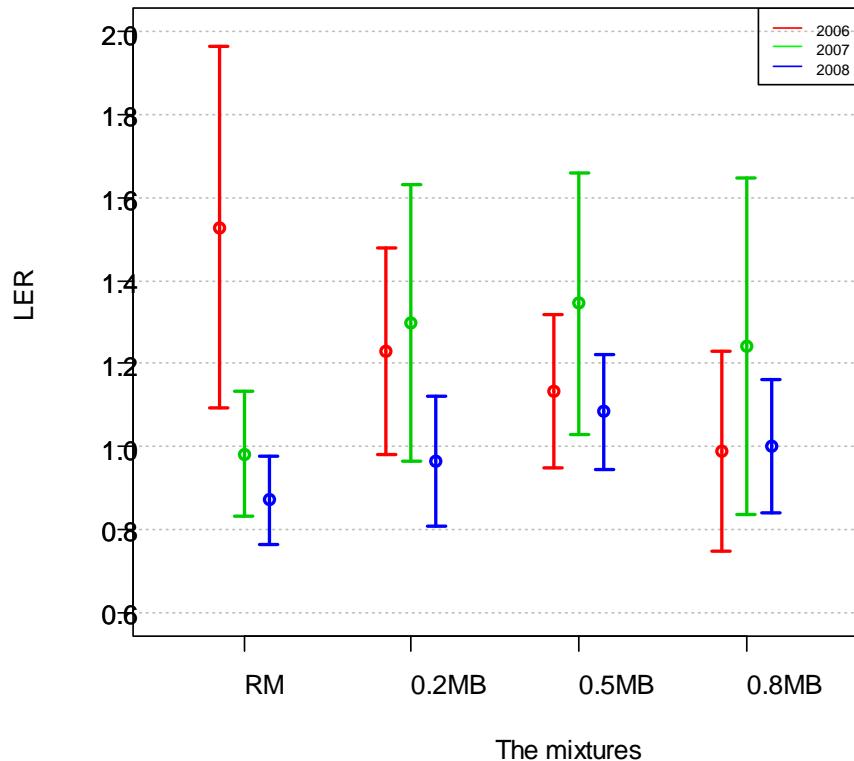

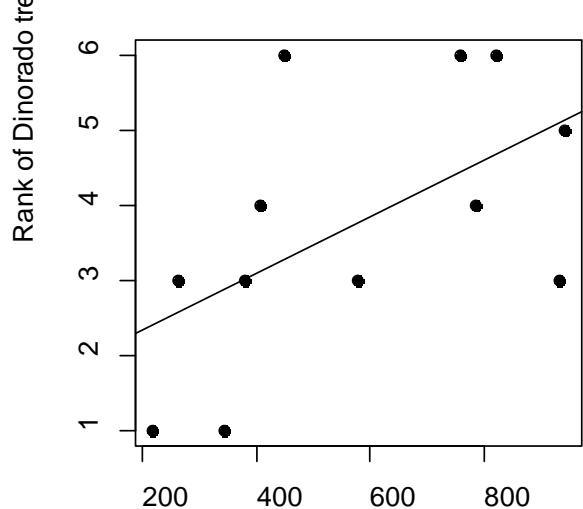

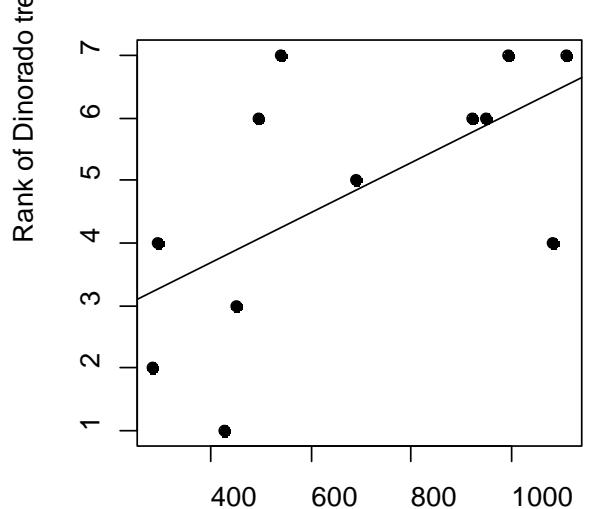

Figure S5. The relation between mean yields and ranks of yield in Dinorado treatment. The mean yield is the average yield per row for each site over seven treatments.

(a). Mean yield

(b). Mean economic

Supplementary Tables

Table S1. Planting and harvest dates for mungbean and rice cultivars UPL Ri-5 and Dinorado in experiments evaluating food crop production in young rubber plantations in Mindanao.

Year	Rubber tree age	Planting Dates and sites		Crops and Harvest Dates	
2006	1-year	May 27	Antipas	UPL Ri-5 Dinorado Mungbean	Oct.10 Oct.2 Aug.15 – Sept.15
		June 1	Arakan	UPL Ri-5 Dinorado Mungbean	Oct.15 Oct.6 Aug.19 – Sept.19
		May 25	President Roxas	UPL Ri-5 Dinorado Mungbean	Oct.7 Sept.30 Aug.12 – Sept.12
	3-year	May 29	Antipas	UPL Ri-5 Dinorado Mungbean	Oct 12 Oct 4 Aug 17 – Sept 17
		June 2	Arakan	UPL Ri-5 Dinorado Mungbean	Ovt 16 Oct 7 Aug 20 – Sept 20
		May 26	President Roxas	UPL Ri-5 Dinorado Mungbean	Oct 8 Oct 1 Aug 14 – Sept 14
	>1 - 2 years	May 16	Naje, Arakan	UPL Ri-5 Dinorado Mungbean	Sept.30 Sept.23 Aug.4 – Sept.4
		June 12	Poblacion, Arakan	UPL Ri-5 Dinorado Mungbean	Oct.24 Oct.15 Aug.30 – Sept.30
		July 17	Doroluman, Arakan	UPL Ri-5 Dinorado Mungbean	Nov.28 Nov.20 Oct.1 – Oct.30

2008	>2- 3 year	April 21	Naje, Arakan	UPL Ri-5 Dinorado Mungbean	Sept.5 Aug.29 Jul.10 – Aug.10
		April 19	Sitio Sabang, Poblacion, Arakan	UPL Ri-5 Dinorado Mungbean	Sept.1 Aug.24 Jul.8 – Aug.8
		April 22	Doroluman, Arakan	UPL Ri-5 Dinorado Mungbean	Sept 6 Aug 30 July 12 – Aug 12

Table S2: Analysis of variance table for 2006 studies of the effects of rubber tree age and cropping treatments. The source column includes all the treatments in this design. The second column indicates whether the treatments are random effects or fixed effects. The mixed effect linear models were applied to the 2006 experiment since the Farms and the Blocks are random effects and rubber tree age is a fixed effect. Each crop (Dinorado, UPL Ri-5 and mungbean) did not appear in each of the eight intercropping treatments (Table 2). Therefore, the analyses were performed for the three crops separately (Columns: Dinorado model, UPL model and mungbean model).

Source	Random Effect	df (All CT)	df (Dinorado model)	df (UPL model)	df(Mungbean model)
RA		1	1	1	1
F(RA)	Random	2(3-1) = 4	2(3-1) = 4	2(3-1) = 4	2(3-1) = 4
B(F RA)	Random	2(3)(3-1)=12	2(3)(3-1)=12	2(3)(3-1)=12	2(3)(3-1)=12
CT		8-1 = 7	5-1=4	5-1=4	4-1=3
CT*RA		7 = 7	1(4)=4	1(4)=4	3
CT*F(RA)	Random	4(7)=28	4(4)=16	4(4)=16	12
CT*B(F RA)	Random	84	4(12)=48	4(12)=48	36
Total		144	90	90	72

Where RA stands for the 2 rubber tree age. F(RA) stands for the 3 farms per RA. B(F RA) stands for 3 blocks per farm. CT is the 8 intercropping treatments.

Table S3. Analysis of Variance Table for 2007-2008.

Source	Random Effect	df (All CT)	df (Dinorado model)	df (UPL model)	df(MungBean model)
F	Random	3-1 = 2	3-1 = 2	3-1 = 2	3-1 = 2
B(F)	Random	3(3-1)=6	3(3-1)=6	3(3-1)=6	3(3-1)=6
CT		8-1 = 7	5-1 = 4	5-1 = 4	4-1 = 3
CT*F	Random	14	8	8	6
CT*B(F)	Random	42	24	24	18
Y		2-1 = 1	2-1 = 1	2-1 = 1	2-1 = 1
Y*F	Random	2	2	2	2
Y*B(F)	Random	3(3-1)=6	6	6	6
Y*CT		8-1 = 7	4	4	3
Y*CT*F	Random	14	8	8	6
Y*CT*B(F)	Random	42	24	24	18
Total		144	90	90	72

Where F stands for the 3 farms. B(F) stands for 3 blocks per farm. CT is the 8 intercropping treatments. Y stands for the year effect.

Table S4. 95% confidence intervals for Figure S1. Treatment abbreviations are given in Table 2.
