

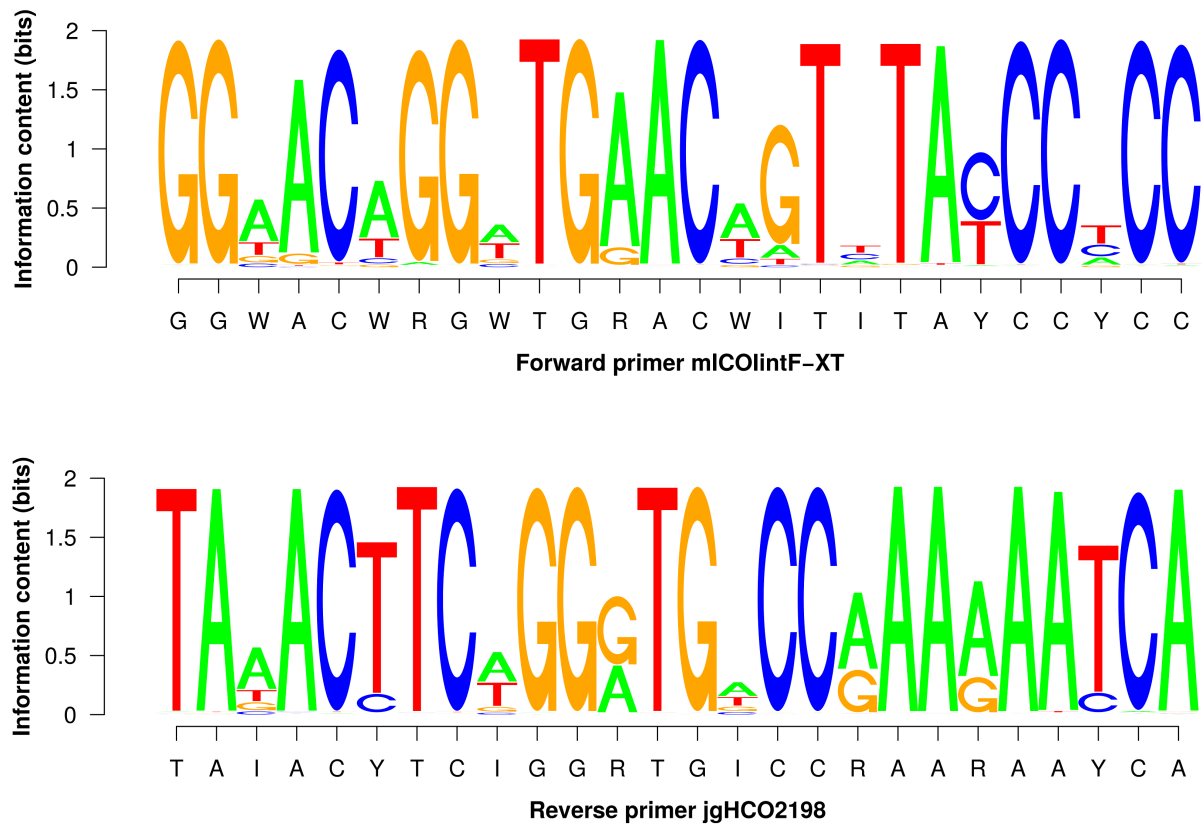

Fig. S2. Sequence logos for the novel Leray-XT primer set for COI

These logos show the conservation rate at the different positions of the primers, whose sequences are shown below each figure. They have been obtained from 148,908 COI sequences from the EMBL-EBI R122 databank, belonging to 38 different phyla from all eukaryotic major supergroups. See Guardiola et al. (2015) for the corresponding logos of the 18S_allshorts primer set.
