

Supplemental Information

Divergent and convergent evolution of housekeeping genes in human-pig lineage

Supplemental Figures

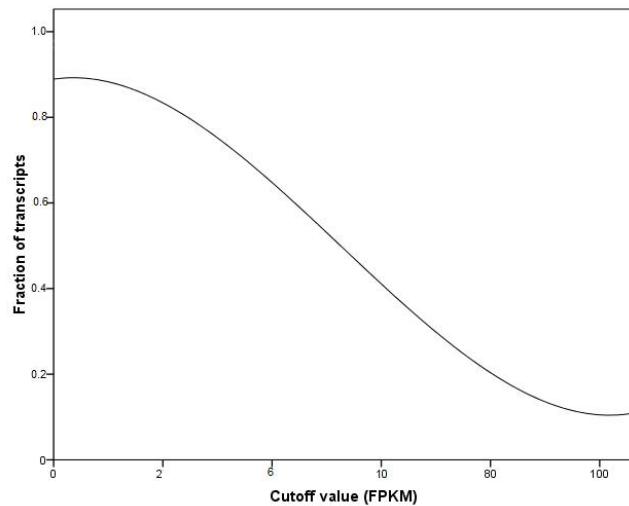

Figure S1. Fraction of transcripts with expression level being greater than a given cutoff value.

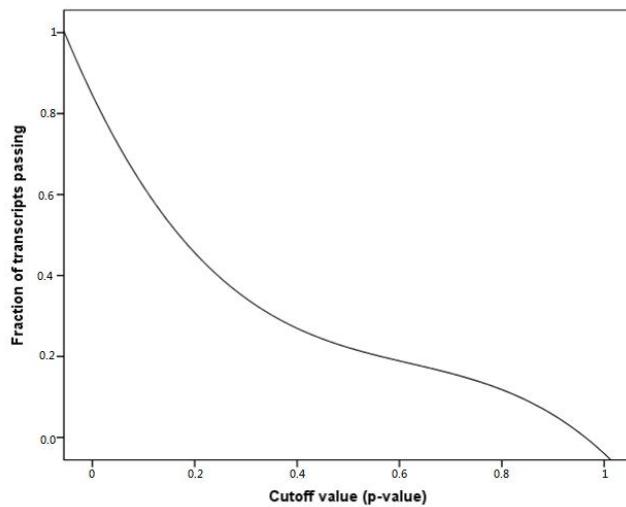

Figure S2 Fraction of transcripts with the p -value being greater than the given cutoff.

The uniformity of transcripts expressing across tissues was tested by the Kolmogorov-Smirnov (K-S) test and accessed by the P -value of the test.

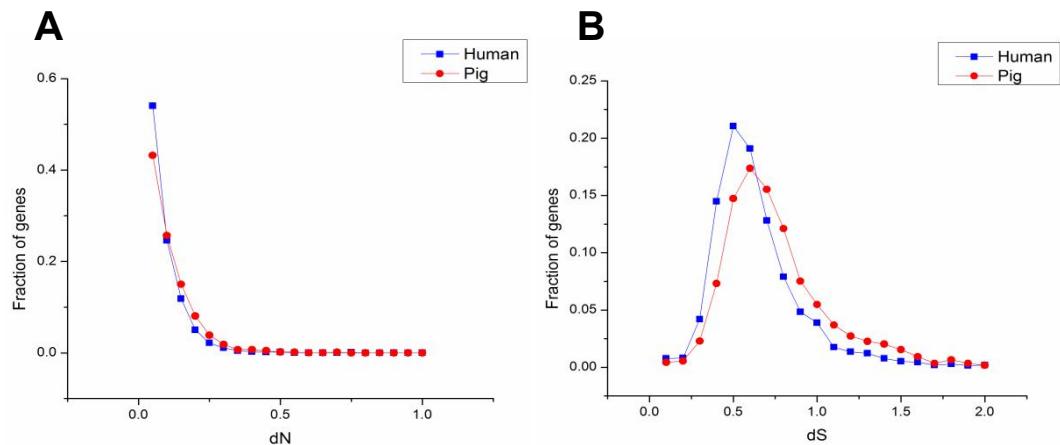

Figure S3 The distribution of dN (A) and dS (B) ratio for housekeeping genes of pig and human.

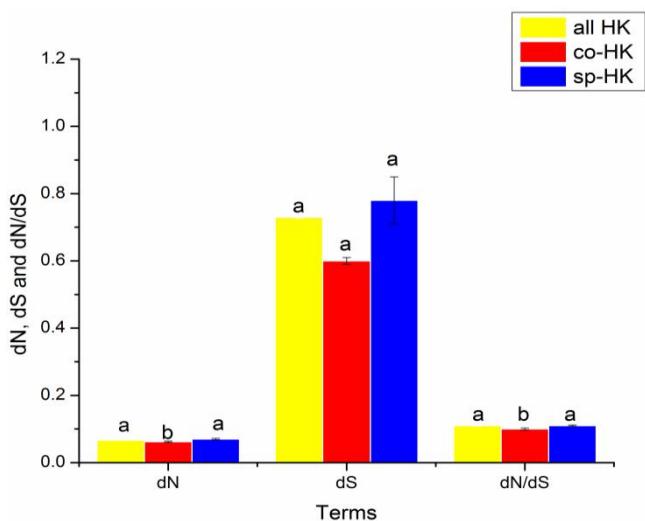

Figure S4 Comparison of evolutionary features in human housekeeping genes.

Significant difference in dN, dS and dN/dS of all, common and species-specific of human housekeeping genes, respectively (Mann-Whitney test, all such means which share a common English letter are similar; otherwise differ significantly at $P<0.05$).
