

Illumina P5 adapter

Illumina P7 adapter

Figure S3: Plot showing the similarities between all primer combinations using a 7 bp in-line tag. All tags show a very high dissimilarity, except for the BF2_2, BF2_B, BR2_2 and BF2_B primer combinations, which use only a 2 bp insert, and thus all show 5 similar bases derived from the amplification primer. All primer tags are however sufficiently different to be distinguished in sequence demultiplexing.
